

# ORION

## Autonomous Enterprise **Intelligence**

Custom AI that runs your operations.

— THE PROBLEM

# Adoption without value

Enterprises are adopting AI everywhere — but almost none are capturing the value. Only **5.5%** qualify as “AI high performers.”

**5.5%**

**Are AI high performers**

Everyone else is experimenting, not compounding value.

**Manual**

**Processes drain margin**

Repetitive work still done by hand across teams.

**Siloed**

**Systems & trapped data**

Knowledge locked inside tools that don't talk.

**Slow**

**Decisions lag**

Insight arrives late, after the moment to act.

— WHAT IS ORION

# Autonomous agents that **reason, decide, and act** across your core processes.

Orion plugs into the systems you already run and executes work end to end – not a chatbot that answers questions, but a workforce that does the job.

— Not a chatbot. It runs the work.

# Three layers, one system

01

## Autonomous agents

Reason & act across multi-step workflows. Make decisions within your guardrails, with human-in-the-loop where it matters.

02

## Connected to your stack

Wired into CRM, ERP, databases, internal tools and documents — acting where work already happens.

03

## Enterprise-grade

Security, access controls, compliance, monitoring and reliability at scale — built in from day one.

# What AI agents unlock

**25–45%**

Savings in service operations

**10–20%**

Cost reduction in engineering & IT

**>10%**

Revenue uplift across sales & marketing use cases

The real unlock is **workflow redesign** — high performers are **~3×** more likely to redesign how work flows, not just bolt AI on top.

*Industry benchmarks (2025), not guaranteed results.*

— WHY TECHTS

# Custom-built and personalized to **your** enterprise.

We don't hand you a generic platform. We design Orion around your operations, your stack and your guardrails.
